Team Charter

Team Details

Project Title: Control Mechanism in Social
Team Name: MermerComing
Github Link: https://github.com/Arthur-Arcadia/DECO-3500-Team-07-Mermer-Coming

Team Members

Ji Zhang
Preferred Name: Jeric
Program of Study: Master of Interaction Design
Email: s4955479@student.uq.edu.au
Personal Aim/Goal: My goal is to gain experience designing and developing social and mobile-focused interactive products. I hope to learn how social needs shape mobile user experience, and improve my ability through team work.

Zirui Zhou
Preferred Name: Arthur
Program of Study: Master of Interaction Design
Email: s4926903@student.uq.edu.au
Personal Aim/Goal: My goal here is to gain a deeper understanding about the social aspect of interaction design, includes how to facilitate a more cooperative and coordinative experience, how to engage more users with a shared design insight, and how to integrate the design implication of social & mobile into user-centered design.

Shiqi Su
Preferred Name: Kiki
Program of Study: Master of Information Technology
Email: s4877105@student.uq.edu.au
Personal Aim/Goal: My goal is to better understand how user research can be translated into practical design decisions. I also hope to gain more experience in user-centred design and understand how design and software development work together.

Yingzhi Xiao
Preferred Name: Elsie
Program of Study: Master of Interaction Design
Email: s4879452@student.uq.edu.au
Personal Aim/Goal: My goal is to get more hands-on experience in user research and UX design. I want to learn how to better understand users' needs and turn research findings into clear design ideas. I also hope to improve my prototyping skills and work more closely with my teammates throughout the design process.

Ping Cheng
Program of Study: Master of Interaction Design
Email: s4916471@student.uq.edu.au
Personal Aim/Goal: My goal for this course is to better understand how technology can support social connection between people. I'm interested in finding small but meaningful ways to make interactions feel more natural, connected, or comfortable, rather than always aiming for a big or complicated solution. Even a small improvement in how people communicate or feel connected through technology would be valuable to me.

Each team member brings unique skills and expertise to the project. The table below summarizes individual roles and responsibilities..

Team Member	Relevant Skills	Initial Responsibilities
Elsie Xiao	User research, Visual design	Visual design, Coding
Ping Cheng	User research, Problem analysis	Problem analysis, Coding
Jeric Zhang	UI/UX design, Coding	UX design, Coding
Kiki Su	Database, Coding	Database, Testing
Arthur Zhou	Circuit Building, Coding	User research, Coding

Communication Plan

The team will use WeChat as the main channel for daily communication, project updates, and general discussions. GitHub will serve as the primary platform for task development, issue tracking, technical discussions, source-code management, and code review. The GitHub repository will be considered the authoritative version of the project. Important decisions that affect the project's direction, tasks, deadlines, design, or development should be communicated to all team members and documented in meeting notes or a shared project document for future reference.

Team members are expected to respond to messages within one working day under normal circumstances. When an issue is urgent, its urgency should be communicated clearly. Members should also notify the team as early as possible if they are unable to attend a meeting, encounter scheduling conflicts, or expect delays in completing their assigned tasks.

The team will normally hold a meeting every Saturday from 4:00 pm to 6:00 pm, either offline or through Zoom. These meetings will focus on reviewing weekly progress, identifying and discussing design or development issues, making necessary project decisions, and allocating tasks for the following week. With the agreement of all team members, meetings may be recorded. A brief meeting summary should include key decisions, assigned tasks, deadlines, and identified risks. Meeting notes and recordings will be stored in the shared team space. Members are expected to attend meetings on time and provide updates on their progress. If a member cannot attend due to a scheduling conflict, they should notify the team in advance and arrange an alternative time to discuss their progress.

For development work, team members must follow Git practices that maintain project stability, traceability, and accountability. The main branch should contain only the most stable version of the project, and substantial changes must not be committed directly to it. Instead, each feature, bug fix, or major task should normally be developed in a separate branch created from the latest stable version. Before starting the work, the corresponding GitHub Issue should be confirmed to ensure that the task has a clearly defined scope and an assigned owner.

Conflict Resolution Plan

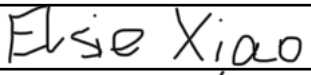

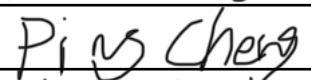

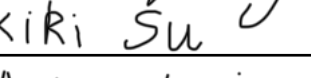

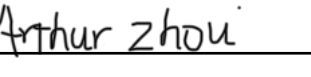

All major disagreements and important decisions must be settled during team meetings, where every member can share their views. If the group cannot reach an agreement after the first discussion, members should consider alternative solutions before the meeting ends to avoid delays. Each team member will explain their ideas, after which the team will discuss and vote on the final decision.

Every team member is expected to contribute fairly to the project. Members are required to attend scheduled meetings and complete assigned work on time. If a member cannot attend a meeting or faces issues that prevent them from finishing their work, they should notify the team as soon as possible. The team will check progress regularly and re-assign tasks if needed to keep workloads balanced.

Any concerns regarding missed meetings, overdue tasks, communication problems, work quality or unequal contributions should first be raised politely with the involved member and discussed by the whole team. The team will agree on improvement steps and record these with a review date. If the problem cannot be resolved, relevant evidence will be collected and the issue escalated to the teaching team.

Team Charter Agreement

The team has discussed and approved the expectations set out in this Team Charter. All members recognize that effective teamwork requires communication, accountability, professionalism and active contribution. The team will raise concerns in a timely manner and follow this charter to resolve team issues.

No.	Team Member Name	Signature	Date
1	Elsie Xiao		20/08/2026
2	Ping Cheng		20/08/2026
3	Jeric Zhang		20/08/2026
4	Kiki Su		20/08/2026
5	Arthur Zhou		20/08/2026
