Groupware Heuristics Evaluation

Session A is the baseline (Discord voice only); Session B uses Discord voice with our group bot.

Coding key

Present	The mechanism exists and worked during testing.
Constrained	Supported, but limited; users met difficulty or needed a workaround.
Absent	The task needed the mechanism, but the system did not provide it.
N/A	The test tasks did not trigger this situation, so it cannot be judged.

Evaluation

#	Heuristic	Session A Discord voice only	Session B With Pally	Evidence
1	**Provide the means for intentional and appropriate verbal communication**	Present	Present	All three members are talking actively among the whole session A and B. This trends decreased a bit while allowed to use Pally, but still remain relatively high frequency.
2	**Provide the means for intentional and appropriate gesture communication**	Present	N/A	In session A, gesture moving and behaving are frequent while each testers communicating with each other, but this does not fit the testing purpose of session B while using Pally.
3	**Provide consequential communication of an individual's embodiment**	Absent	Present	Specifically, while the consequential communication are absent during session A, there are obvious and observable hesitations, thinking while tying and content adjusting before send for this specific target.
4	**Provide consequential communication of shared artifacts**	N/A	Present	No participants know the exact person that triggered the bot message, this does not fit in session A.
5	**Provide protection**	N/A	Present	Obviously, while no one knows who is actually triggering the bot function, the privacy of the user is under protection
6	**Management of tightly and loosely-coupled collaboration**	N/A	Constrained	I can observe some hesitations in selecting the desired functionality, this includes choosing the specific functions. Participant is also confused by the message the bot shown.
7	**Allow people to coordinate their actions**	Constrained	Present	Clearly, the argument and quarrel are decreased while the similar situation happens to the participants when using Pally, they trend to use extra tools to break the deadlock between them.

#	Heuristic	Session A Discord voice only	Session B With Pally	Evidence
8	**Facilitate finding collaborators and establishing contacts**	N/A	Constrained	According to my observation, Pally has limit help in finding and facilitating connections with others, while the choices and results can be rejected by other players who are more dominant within the group.j

Key Observations
My observation target was chosen as the random pick, while his opinion was ignored by others previously. Interestingly, the conflict stops when he is selected, and his idea becomes the group decision.
